# Light Output

Optimal, uniform light is provided by 100,000 points of light in an L1 format. Our LEDs have a lifetime of 80,000 hours.  
Their brightness is up to 2,500 lux (L1), equal to 98 LEDs per metre.

By contrast, an LCD screen only emits 300 lux making our displays up to 8 times brighter.  
Exceptionally low power consumption value - only 5W (L1).  
Combined with our backlit film, these screens display images with deep contrasts and eye-catching colors.

# Innovative mounting system

Modern and robust, our brackets are made from a high quality aluminium alloy.  
The display columns can be moved and reconfigured thanks to our patented VDS V3 Display Bracket System.

# Why choose 24 Volts?

Our R&D department's technological choices effectively overcome the issues of a display environment.  
By using a low voltage, we have been able to halve the electrical usage while significantly reducing the display units' internal temperature (joule heating).

## Support and Warranty

Our products come with a two year warranty.
